

Jared Stoddard

Full Stack Engineer

jared.stoddard2@gmail.com

+1-425-365-1071

Lynnwood, Washington

[Professional Portfolio](#)

<https://www.linkedin.com/in/jared-stoddard>

Full-stack engineer & founder experienced in production systems and AI-powered workflows. I use AI effectively, understand its limitations, and know when manual engineering delivers better precision. I have shipped real full-stack products end-to-end, building scalable frontends, APIs, and production systems.

WORK EXPERIENCE

Full-Stack Engineer / Founding Engineer

Dec 2025 – Today

Self Employed

AI SaaS Platform - Auto Website Generation & Lead Intelligence Systems

- Architected a **multi-tenant SaaS platform** with Next.js 16, React 19, Node.js, and MongoDB, supporting **custom domains**, subdomains, tenant isolation, **automated SSL provisioning**, and secure ownership validation.
- Built a multi-step **AI orchestration pipeline** using OpenAI GPT-4, Google Places/Search APIs, and **web scraping** (Cheerio + Puppeteer) to analyze businesses, generate structured content, inject SEO metadata (JSON-LD), and deploy complete websites in **under 30 seconds**, saving businesses weeks to months of manual work.
- Developed a realtime **visual CMS**, enabling **live previews**, **inline editing**, and versioned content management for AI-generated sites.
- Designed a distributed job orchestration system with **atomic MongoDB job claiming** and strict concurrency control (50+ parallel workers), processing **thousands of Lighthouse + Puppeteer audits/day** with zero duplicate execution.
- Engineered a **Chrome process lifecycle manager** that eliminated orphaned processes and reduced memory usage by **>50%** during high-volume automation workloads.
- Created a deterministic, tile-based geographic scanning engine using the Google Places API, achieving **100% regional coverage**, **zero duplicate business records**, crash-safe resume across long-running scans, and **reducing Places API costs by ~60–80%** by eliminating redundant lookups.
- Implemented a **multi-step email & SMS automation system** with dynamic templating, score-based conditional logic, timezone-aware scheduling, rate limiting, A/B testing, and analytics, supporting **high-volume compliant outreach campaigns**.
- Built scalable **MongoDB schemas and indexing strategies** supporting **millions of lead records**, **<200ms** filtered queries, pagination, aggregation pipelines, and geospatial distance sorting.

Full-Stack Engineer / Founding Engineer

July 2025 – Today

Self Employed

Founded and built a production SaaS platform for shared expense management, automated payments, and SMS reminders, supporting live users and real-money transactions.

- Architected and implemented end-to-end systems using **React**, **Node.js**, **Express.js**, **MongoDB**, **Mongoose** and **Tailwind CSS**, owning frontend, backend, APIs, infrastructure, and deployments.
- Designed and shipped a live MVP in under **30 days**, prioritizing security, reliability, and financial safeguards from day one.
- Developed **RESTful APIs** supporting recurring billing, payment tracking, retries, and **idempotent transaction handling**.
- Implemented **timezone-aware scheduling** and **cron-based workflows** to ensure accurate billing and reminders across regions.
- Integrated **Stripe (payments)**, **Plaid (bank linking)**, and **Telnyx (SMS)** with robust error handling, observability, and controls.
- Built **fault-tolerant financial workflows** using safe retries, idempotency keys, and abuse-prevention mechanisms.
- Developed internal **admin dashboards** for real-time analytics, cost forecasting, user behavior monitoring, and operational

insights.

- Built an **automated workflow** that generated social media scripts and automatically published content to social platforms.
- Implemented end-to-end **analytics tracking** across onboarding, activation, conversion, retention, and LTV.
- Led data-driven growth experiments across **Google Ads, SEO, and onboarding optimization**, improving activation and retention through iterative testing.
- Continuously shipped backend, frontend, and **UI/UX improvements** driven by production data, user feedback, and insights.

Full-Stack Engineer

July 2024 – February 2025

Storied Sports

Full-stack engineer who developed and deployed a cinematic, motion-driven storytelling platform for the U.S. Women's National Soccer Team (USWNT) and partners including Adidas, Seattle Reign FC, Storied Sports, and The REALEST.

- Collaborated with designers and creative stakeholders to deliver a **production-grade React application** using reusable component systems.
- Translated brand and editorial requirements into scalable **frontend architectures** with dynamic hero sections, image sequencing, and narrative layouts.
- Built a **high-performance image pipeline** using responsive assets, lazy loading, and modern formats to meet publishing and performance standards.
- Implemented custom **animation systems** using **Framer Motion** and **Tailwind CSS** for scroll-based reveals and transitions while maintaining performance.
- Delivered **mobile-first, responsive designs** ensuring consistent behavior across breakpoints and devices.
- Ensured **accessible, brand-safe implementations** aligned with compliance and quality standards required by professional sports partners.
- Leveraged Notion, Figma, and GitHub Actions to accelerate design iterations, enhancing team collaboration and reducing project timelines.

Full-Stack Engineer

July 2024 – February 2025

2351 Labs

Full-stack engineer building internal tools and platforms for enterprise teams.

- Designed and built a production-grade **internal catalog platform** to centralize services, libraries, and tooling across teams.
- Delivered a **white-labeled, themeable React UI** adaptable to multiple clients while maintaining a shared core system.
- Partnered with product and design to define **information architecture**, discovery flows, and **documentation standards**.
- Implemented **server-side pagination**, advanced filtering, and **URL-driven state** for scalable, shareable data views.
- Built and maintained backend services using **Node.js, Express.js, MongoDB, and Mongoose**, implementing secure authentication with **OAuth 2.0 (Google & Microsoft)** and **JWT-based role-based access control (RBAC)**.
- Developed data-dense interfaces with **sortable, resizable tables** and **responsive layouts** for complex workflows.
- Owned **production deployments** and environment configuration across **Netlify, Render, and MongoDB Atlas**.

Department Manager

April 2018 - December 2023

Safeway & Kroger

Operations leader managing high-volume retail departments with a focus on analytics, efficiency, and execution.

- Managed end-to-end department operations using performance metrics, analytics, and operational KPIs.
- **Increased department profitability by ~50%** within the first quarter through process optimization.
- Revamped product rotation process, resulting in a **30% reduction for expiring product loss**
- Reduced expired inventory loss by **~30%** by redesigning rotation and replenishment workflows.
- Improved inventory accuracy by **~20%** through structured reporting and discrepancy analysis.
- **Led cross-functional teams** in fast-paced environments, balancing staffing, prioritization, and execution.

EDUCATION

Bellevue College - Associates Degree.

August 2021 - July 2023

Studies focused on engineering, physics, calculus and computer science.

The George Washington University - Certification, Full-Stack Flex Program.

August 2023 - February 2024

12 month course covering fundamentals of full-stack engineering.

SKILLS

Languages & Frameworks:

JavaScript (ES6+), React, Node.js, Express.js, HTML5, CSS3, SQL, MQL, Java, Tailwind CSS, Next.js

Frontend Development:

Responsive Web Design, Frontend Architecture, Component-Based Architecture, Single Page Applications (SPA), Design Systems, UI Development, UX Engineering, Web Components, Web Accessibility (WCAG), Cross-Browser Compatibility, Performance Optimization, Client-Side Rendering, Server-Side Rendering, State Management, REST API Consumption, Figma, Prototyping.

Backend Development:

RESTful API Design, Server-Side Development, API Integration, Authentication & Authorization (OAuth 2.0, JWT), Role-Based Access Control (RBAC), Data Modeling, Schema Design, Microservices Architecture, Background Jobs, Cron Scheduling, Idempotency, Error Handling, Input Validation, Webhooks, Web Scraping, Caching, Edge Functions.

Databases & Data:

MongoDB, PostgreSQL, MySQL, Mongoose, NoSQL Databases, Query Optimization, Indexing Strategies, Transactions, Data Structures, Schema Design.

DevOps, Cloud & Tooling

Git, GitHub, CI/CD Pipelines, Deployment Automation, Environment Configuration, Docker basics, Cloud Platforms (AWS, Google Cloud Platform, Microsoft Azure - familiarity), API Testing (Postman, Insomnia), VS Code, Agile / Scrum Methodologies.

Product, Delivery & Business Impact:

MVP Development, Startup Environments, Product-Driven Engineering, Feature Ownership, Iterative Development, User-Centered Design, Cross-Functional Collaboration, Project Management.

AI-Assisted Development:

AI-Assisted Coding, GitHub Copilot, ChatGPT, Prompt Engineering, Code Generation, Code Refactoring, Debugging Assistance, Documentation Generation, Developer Productivity Automation, Workflow Automation, Prompt Chaining, Cursor.

Design & Media:

UI Design, Visual Design, Graphic Design, Digital Design, Layout Design, Branding Fundamentals, Design Systems (Visual), Wireframing, High-Fidelity Mockups, Asset Creation, Image Optimization, Adobe Photoshop, Adobe Illustrator, Figma, AI-Powered Design Tools.
